SUCCESS OF RABIES CONTROL PROGRAMME IN INDIA — III

Humane Society International (HSI) / India has since completed the census survey of the population of street and owned dogs in Haryana State and the total number of dogs (owned and street) in Haryana is over 25 lacs. There are approximately 10 dogs per 100 people in the State of Haryana which is much higher than the other parts of India, where there are only 3-4 dogs per 100 people. The Hon’ble Chief Minister of Haryana, Shri Manohar Lal Khattar officially launched the programme from Gurugram on 13th March 2015 by flagging off the HSI / India’s Anti-Rabies Task Force Convoy of specialized vehicles. The programme has commenced from Hissar Division of Haryana State. The programme will be implemented both in rural and urban areas. World Veterinary Services India (WVS India) will start implementing the programme in Gurugram Division from July, 2015.

The Ministry of Health and Family Welfare has initially identified a sum of Rs.30 crores for implementation of animal component in Haryana State for mass vaccination and sterilization. A sum of Rs.100/- will be paid for catching, marking and anti-rabies vaccination and Rs.700/- for surgical sterilization and vaccination of each dog (both male and female). However, for successful implementation of this challenging programme the two implementing agencies are also being provided with necessary assistance from Haryana Govt. (1) Civic bodies and Panchayats – to provide infrastructure lodging facilities for the teams and vehicles to bring street dogs to the Animal Birth Control Centre for sterilization and releasing them back after sterilization to their original habitats and 2) Dept. of Animal Husbandry – to provide infrastructural help of their Veterinary Hospitals for establishing street dog sterilization centres. For complete transparency in the implementation, the programme will be monitored and coordinated by the officials of Govt. of Haryana.

TRICHY: Despite a Supreme Court ban on the sport, Jallikattu was held at Nanganallurpattu village near Ponnamaravathi in Pudukkottai district on Aug 2, 2016. However, the police claim that they prevented the event as they had received information that it was being planned. The Animal Welfare Board of India asked the district administration to submit clarification on the reported event. As per report, over 200 bulls were reportedly brought from the Pudukkottai, Sivagangai districts and Manapparai in Trichy district to the village. The event started at 9 am and went on till 12.30 pm as part of the Aadi festival organised by a closed group of people. Sources at Ponnamaravathi say Jallikattu organisers use this as an advantage to escape action as the police often pass the buck over jurisdiction. “Though 50 police personnel were deployed at the venue, none dared to stop the event,” said a villager who attended the event.

Meanwhile, a senior police officer from Pudukkottai said no such event took place in Pudukkottai district. (Source: K. Sambath Kumar| TNN | Aug 2, 2016) – AWBI/ Agencies

ANDHRA PRADESH BANS MANJA – A VICTORY

Hyderabad: Government of Andhra Pradesh bans deadly manja during Makar Sankranti and other occasions in the State. Honourable Chief Minister, the Environment Minister and the Chief Secretary of Andhra Pradesh calling for a ban. In the letters, PETA India pointed out that manja kills thousands of birds every year, including those who are endangered and also kills or injures numerous domestic and other species of birds. Taking into account the severe damage caused by manja to humans, birds, infrastructure, and many states and state administrations in India have already banned or restricted the sale and use of manja – including Maharashtra, Gujarat, Telangana, Uttar Pradesh, Chennai, Amritsar, South West Delhi and the Gandhi Nagar subdivision of East Delhi. The Ministry of Environment, Forest and Climate Change has also issued an advisory urging the state governments to address the manja menace and the Animal Welfare Board of India has written to all states and union territories encouraging them to ban manja. WE MUST HAVE ELEPHANT RESCUE CENTRES: SMT. MANEKA GANDHI

NEW DELHI: Union Women and Child Development Minister and animal rights activist, Smt. Maneka Gandhi is moved by the appalling evidence of elephant torture and trauma brought out by “God in Shackles”, a critically acclaimed documentary exposing the abuse of Kerala’s captive elephants. She says elephant rescue centres were the need of the hour. “Gods in Shackles”, directed by Canada-based Ms. Sangita Iyer, portrays stories behind the veil of Kerala’s prestigious temple festivals. The film was screened for public at PVR Rivoli read a statement. Smt. Maneka Gandhi said: “Over 800 elephants have died in the last two years of beating and starvation in Kerala. To say that elephant is thriving in India, it is not. There are less than 20,000 left, of which Kerala is killing as many as it possibly can. Begging elephants must get off the road. We must have elephant rescue centres. The Kerala Government has to take a decision now – to keep killing these endangered species or take action to rescue them.” She added: “We have strong laws in place. Wildlife Act is a strong law but if Kerala Government chooses to ignore it, what can we do. It is because of the strong stance that the Atal Bihari Vajpayee led BJP Government took to rescue and rehabilitate bears that the Asian News Service (Source: Indo-Asian News Service | July 17, 2016)
SHILLONG: A workshop on Animal Welfare issues, especially aiming at changing the way the animals are treated has been conducted by the Directorate of Animal Husbandry & Veterinary Department, Govt. of Meghalaya on 16th July, 2016. "Very few State Government in the country have taken initiatives to set up State Animal Welfare Board (SAWB)." said Dr. S. Bharat Kumar, Humane Education Officer of Animal Welfare Board of India (AWBI) in the gathering. The AWBI official was delivering presentation on ‘Prevention of Cruelty to Animals’ at a workshop organized by the Directorate of Animal Husbandry & Veterinary Department. Through the workshop, the department aimed at involving all stakeholders for their support and cooperation towards activating the SAWB and SCPAs in the state for effective implementation of the PCA Act. Traditional headmen from different localities of the city, officials of various departments including police and animal rights activists attended the workshop, which is a first of its kind held in the State. In Meghalaya, the SAWB was first constituted in 2009 and reconstituted in 2013. Despite SAWBs having already constituted in all 11 districts of Meghalaya, they are yet to start functioning. Parliamentary Secretary in-charge, Animal Husbandry & Veterinary Department, Dr. Kennedy C Khyriem said, “Animals are all living things God created and their rights have to be protected.” Stating that there was a close relationship between man and animals during the Neolithic age, he said, “Over the years, human tendency to break that bond and resort to cruelty to animal.” Dr. Khyriem also said the issue relating to whether it is a question of welfare to keep animals in a cage or zoo with limited rights is something which has also to be discussed at such platform. Earlier in her speech, Commissioner & Secretary in-charge of the department, Dr. MHE Marak said the workshop aims at changing the way we care about the animals.

**ANIMAL WELFARE WORKSHOP HELD IN MEGHALAYA**

Kangara: Young couple, after leaving their jobs in the United States, is serving for ailing and injured animals in Dhanet village located in Shahpur Tehsil of Kangra district in Himachal Pradesh. Shri Robin Singh and his wife Mrs. Shivani had a passion to serve and feed stray animals since childhood but left to the US in 2003. Shri Robin said that it took him a decade to realize that he himself should serve the injured animals instead of seeking help from others. He said it was in 2013 that he decided to move back to India and work for the rights and welfare of animals. In December, 2014, they built a “Peepal Farm” which had a cow shed, a clinic and a few environment-friendly rooms for injured animals. “Injured stray cows, dogs and mules are given treatment here unless we can find a home for them. Robin said, “Rescue work is like running on a treadmill. We also focus on solutions which can help address the issue of animal rights. "For dogs, we were encouraging adoptions and had coined the term ‘Desi dog, Desi dog’, he added. There is no consumption of any animal product, including milk, in the farm. The couple is instead growing their fruits and vegetables and making low-vomiting, high-protein, the cheaper and cruelty free alternative to cheese. For financial sustainability, they were working on ‘cow dung pots’. Once we are successful in creating awareness about these pots, we can encourage farmers not to abandon their ‘unproductive’ cows and bulls and instead sustain them by making and selling pots from cow dung. The couple has sought help from the government to help them set up a Gaushala. (Source: The Tribune, August -2, 2016)

**ANIMALS RESCUED FROM GLOBAL CIRCUS**

Madurai: Tamil Nadu Following a complaint filed against Global Circus which was recently stopped in the Madurai District of Tamil Nadu by Animal Welfare Board of India (AWBI) authorised inspectors, the circus management relinquished all 3 dogs in its possession to the AWBI immediately for rehabilitation and pledged to become an animal-free, human based performance only. The Federation of Indian Animal Protection Organisations (FIAP) facilitated the rescue effort. The animals have been moved to a sanctuary run by People for Animals in Tamil Nadu (PFCA), Chennai, where they will be cared for and given treatment for their injuries. Global Circus also signed an affidavit promising never to use animals again. The inspection team established that the circus was using animals in direct violation of the Performing Animals (Registration) Rules, 2001, since AWBI had not issued the Performing Animal Registration Certificate to the circus, which is mandatory to use animals for shows. This prompted the AWBI to write to the Kerala Deputation Committee requesting urgent action.

**Successful training for ABC/ AR Program in A. P.**

Hyderabad: Government veterinarians of the AP State has concluded a spay/neuter training program during the month of April 2016 and emphasized on the practical surgery training and the team treated 1,865 dogs from different locations of Hyderabad by sterilizing them and vaccinated them against rabies. The intense two-week program included hands-on training in the surgical procedure ‘human’ handling of the animals and post-operative management. The program aims at capacity building by diffusing high-quality skills in spaying/neutering in the district level and in turn, improve the reach of enriched animal care. HIS/India, Blue Cross of Hyderabad and Andhra Pradesh Animal Husbandry Department collaborated on the training. Smt. Amala Akkineni, Chairperson of Blue Cross of Hyderabad and Andhra Pradesh Animal Husbandry Department and now will be conducted by JNU in NIAW campus,” Minster MoEF & CC said. Hon'ble Minister added that ‘100 days’ time has been given to complete all the procedures to begin the courses. The NIAG, set up to meet the education and training needs of the animal welfare sector, had already launched short-term courses in 2005 and has so far trained more than 1,000 personnel. Blue Cross of Hyderabad adds, “It has been an honour and privilege to partner with HIS/India and Government of Andhra Pradesh to train 113 veterinarians in the spay/neuter techniques. The results are already visible as a reduction in animal suffering,” Minster MoEF & CC said.

**An agreement for animal welfare studies**

NEW DELHI - An agreement was signed between the Jawaharlal Nehru University (JNU) and the National Institute of Animal Welfare (NIAW) to start a course on animal welfare at the JNU with 200 students for the first year. The agreement was signed in presence of the Union Environment Minister and Hon’ble HRD Minister. This course will help in preparing competent manpower to man various posts in zoos, municipalities, slaughter houses and veterinary hospitals. Such courses are offered in countries like Australia and New Zealand and now will be conducted by JNU in NIAW campus,” Minister MoEF & CC said. Hon'ble Minister added that ‘100 days’ time has been given to complete all the procedures to begin the courses. The NIAG, set up to meet the education and training needs of the animal welfare sector, had already launched short-term courses in 2005 and has so far trained more than 1,000 personnel. Hon’ble Minister MoEF & CC said that the Ministry of Environment has sought JNU as an academic partner to help the institute in developing academic programmes according to national needs and global standards in the field of animal welfare. The government had estimated the net cost of the project at around Rs. 88 lakh for the first year and would enroll students for diploma and certificate courses. “JNU is a university that has name and credibility in academic activities and launching of this course is a good beginning for expanding its academic activities,” Hon’ble Minister HRD said.

**Let’s Rescue Snakes This Nag Panchami**

Udaipur: Sunny, a female stray dog was successfully rescued from a deep well in a village located few kilometres from Udaipur. The Animal Aid Unlimited (AAU), an organization that works for street animals took quick action as soon as the team came to know about her situation and brought her back to safety. She had been stuck in the open well for five days. Villagers in the area came to know about Sunny only when they heard her crying from inside the well. The locals could not descend and rescue her because the walls of the well are very unstable and it would have been dangerous. They wanted to help her and they informed AAU and two rescuers from the team reached the spot. Ganpat and Kalu Singh saw the well and realised that it was not in the condition for anyone to climb down. So they arranged for a crane, used it to descend, and finally rescued Sunny. (Source: http://www.thebetterindia.com/Tanya Singh/ July 29, 2016)

**A Stray Dog Rescued from A Deep Well**

Hyderabad: As the month of August begins, so do Nag Panchami preparations, which include capturing snakes. Snakes are captured in suffocating bags, kept in tiny boxes and suffocated. The team came to know about her situation and brought her back to safety. She had been stuck in the open well for five days. Villagers in the area came to know about Sunny only when they heard her crying from inside the well. The locals could not descend and rescue her because the walls of the well are very unstable and it would have been dangerous. They wanted to help her and they informed AAU and two rescuers from the team reached the spot. Ganpat and Kalu Singh saw the well and realised that it was not in the condition for anyone to climb down. So they arranged for a crane, used it to descend, and finally rescued Sunny. The Cattle rearing, as it exists today in India, is not subsistence farming level, but is quite financially unviable. As long as the cow is in milk, the farmer is willing to maintain her, but once the becomes permanently dry, the scenario changes. So is the case with bullocks which become aged and infirm. Male cow-calves are often sold at very young ages, with the farmer-owner knowing full well that the calf he is selling will definitely land under the butcher’s knife. The answer lies in the harnessing of all cattle by-products such as cattle dung and urine for various purposes. It is also possible to increase the profitability of the ventures by increasing the unit size and using current technologies, thereby generating wealth and employment. The proportionate contribution of livestock sector (4.8 – 6.5%) to total Gross Domestic Product Growth (GDP) has remained constant, its contribution to agricultural GDP has gone up over the years. This however does not include animal power, which is valued at between Rs 4,000/ and Rs 9,500/ per animal and prices in terms of fuel equivalent. According to the Economic Survey of India 2001-2002, the contribution of milk and milk products alone, (Rs 1,01,990 crores =higher than wheat (Rs 47,091 crores) and sugarcane (Rs 27,647 crores).

Status of Goshala in India

- We have approximately 4000 Gaushalas and the number is increasing due to large stray cattle population.
- Their strength varies from 500 to 10000 cattle.
- Of AWBI in 1988-98 were very few Gaushalas.
- The number raised to 439 in 1998-99 and few hundred Gaushalas were recognized by the Board. Today, the Board has recognized more than 1800 Gaushalas in the Country. The awareness for the protection of cows and its progeny has increased in many fold during the last two decades and the organisations are established all over the Country.

Gaushalas needs to be made as Centre of Excellence the rural development and the use of by-products/biomass like cow dung, urine, milk etc. produced from Cattle and its progeny

Well trained institutions are to be established in each state for mass awareness and making the rural people to be economically self-reliant by using the bio-mass for community development.

Using the full potential of the Biomass (cow dung) cow urine :

- To empower Gaushalas to act as farmers training and demonstration centre for organic farming.
- To act as centers of local native breed improvement and conservation
- To meet the rural energy requirement
- Farmers capacity building to utilize the local resources through Gaushala platform
- To develop marketing strategies for Gaushala produce
- To gainfully utilize the animal and agricultural waste in Gaushala.
- To make Goshalas self sustainable
- To empower Goshalas as a tool for holistic and sustainable development in rural areas

Training to Gaushalas personnel is being imparted in the following disciplines -

- Production of Bio-Gas and Methane Gas - Generation and bottling of methane gas by splitting the biogas, which is used as vehicular / cooking gas.
- Production of dry ice from carbon dioxide obtained by splitting the biogas.
- Production of Biogas by recycling huge quantity of energy rich cow dung available in Gaushalas through the medium of Gobar gas plants of various capacities viz., 25, 35, 45, 60, 85 Cu.m. AWBI has established 75 I.B.P.'s in many Gaushalas all over country.
- Using diesel engine the biogas is converted into electricity (20% diesel:80% Biogas) which is gainfully utilized as domestic power.

- Electricity is generated by a set of six batteries with the help of a simple device which is activated by utilizing draught power! Bullocks for two hours. The charged batteries provide adequate power for lighting for 24 hours in a domestic unit.

Pilot Projects to generate 400 KW electricity from Biomass:

- With subsidy provided by Ministry of New and Renewable Energy on AWBI initiative - 5 pilot projects are being established in 5 Gaushalas sheltering more than 5000 cattle.
- The project is being put up by an entrepreneur M/s. Shri Krishna Captive Energy Pvt. Ltd from Bangalore with Holland technology.
- The project will also include a silage preparation / storage plant to produce 5000 tons of enriched fodder every year for Gaushalas at marginal cost.
- Project will also produce stabilized compost (500 tons) for Gaushalas at marginal cost.
- Copy of Project document is available for guidance.

PRODUCTION OF VERMICOMPOST/BIO FERTILISERS

- Gaushalas are recognized for production of excellent quality of bio fertilizers(vermi compost) with the help of earth worms.
- Vermi-compost rejuvenates the fertility of the soil and is also eco-friendly.
- Vermi compost is far superior compared to the chemical fertilizers and it is used in organic farming.

PANCHGAVYA MEDICINES

The panchgavya medicines are made by using cow milk, curd, butter, ghee and cow urine along with the local herbs. These medicines have been found extremely useful in treating several dis-eases in human beings. Their use is getting more and more popular by the day. Several cosmetic items such as soap, shampoos and creams are also prepared by using panchgavya items. Panchgavya medicines are affordable by the rural community.

PROMOTING USE OF BULLOCK DRIVEN TRACTOR FOR AGRI USE

- Bullock driven tractors are being efficiently used by model Gaushalas for ploughing their fields for production of food and fodder.
- These are improved agricultural implements promoting use of bullock power.
- Male calves of Cows progeny are thus gainfully utilized for agricultural operations.

Others

- Generating Electricity from Bio-gas:
- Production of Vermi compost / Organic Bio fertilizers
- Use of draught power for energy generation and agricultural operations
- Utilisation of cow urine and local herbs for making Bio-pesticides, Bio-growth, Bio-phenyl, mosquit repellent coils and pahchgavya products for ayurvedic treatment
- Indigenous Breed improvement and conservation through gene pool and germ plasm.
- Training in Veterinary First Aid and disease prevention
- Organic farming and water harvesting
- Serious problems faced by most of Gaushalas:
  - Mismangement due to unskilled manpower
  - Traditional outbreak to survive on public charity/AWBI/State Grants
  - Paucity of funds and lack of infrastructure
  - Lack of knowledge on exploitation of local resources
  - Lack of marketing strategies for their produce
  - No proper breeding concept / policy
  - No proper Animal waste management
  - No proper Animal waste management.

WHY THE COW IS KNOWN FOR LOVE & PROSPERITY OVER THE CENTURIES

The land produces plant life, which in the form of food grains, oil seeds, vegetables and crop residues, as well as legumes, green fodder, grasses serves as feed and fodder for cattle. While milk animals give milk and milk products for human consumption, draught animals serve as an invaluable source of power for agricultural operations, ploughing the fields, drawing water from the well and extracting oil from oil seeds etc., as well as for transportation of goods and people, especially in the rural areas. During the productive life of the animal, whether milk or draught cat-tle, as well as after the productive life, cattle give dung, which is an invaluable input for producing organic manure, which is put back in the land for enrichment of the soil. Cow urine is also of immense medicinal value. Research in cow urine is gaining immense significance in cure of some diseases like cancer, renal failure and so on. Cattle urine is also a powerful natural pesticide and, if used properly can save human beings from the harmful effects of pesticide residues in every thing he eats and drinks. After drying a natural death, carcasses of cattle can be utilized for hides / skins and other by-products, at the same time providing employment to rural poor, who are traditionally en-gaged in this trade. The present discussion is only to high-light the inter-dependence of human beings, cattle and land resources.
